

INST0004: Programming 2 [Alien Invasion Game]

October 2024

Dr Daniel Onah

Marking Scheme – 50% game functionality, 50% program structure

Project

This project will be marked for functionality and program structure, with 50% of the marks on functionality and 50% for program structure/code layout. The demonstration marks will be given based on the research approach, design decisions and finally, the presentation/video recording of the project execution demo.

Game Functionality	
A	Has completed requirements for B. Can demonstrate potential of good game development structure. Show the potential of reusable code functionality. Code structure follows the modularity convention. Adding additional components not specified in the project specification.
B	Has completed requirements for C. Start the game and run the application with level of difficulties. Show interactive game functionality.
C	Has completed requirements for D. Is able to run the provided codes with the alien and objects at the centre of the screen.
D	Has shown potential of using the provided code from the textbook resources to run the game simulation.

Grading:

A : 70% above, B: 60%, C: 50%, D: 40%

Program Structure	
A	The program applied the required modules and libraries for the game development. The game design and simulation codes are well structured
B	The program is well design that could be generalizable. Variables and methods are well assigned and structured.
C	The program uses any of the following effectively; classes, methods, conditionals and variables successfully throughout the design.
D	The program design should show reusable code functionality that could be applied with minimum changes in a different dimension. There are variables that aid the design execution and some repetitive code. Well commented code structure throughout.

Grading:

A : 70% above, B: 60%, C: 50%, D: 40%

Overall grade: 100%

INST0004: Programming 2 [Alien Invasion Game]

Dr Daniel Onah

Not part of the marking criteria.

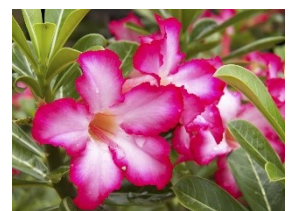

But, it will be nice to have 10-15mins demonstration on the working of your code and your game.

Star Categories:

By showing a demonstrable example of additional work and /or good programming practice, you will be awarded a star (*) grade to your work. If you feel your work shows additional merit beyond the specification, do comment on this, and show the merit in your comments and video demonstration. Example of a star award would be for a functionality complete game invasion simulator (including movement of the aliens, shooting, and detecting the end of game/winner). Also, the use of a GitHub version control to collaborate on the project and including the link for download.

Guidelines

You could divide up labour between your group by getting different members of the group to write the programs for different parts of the Alien Invasion game, but if you do that you need to make sure that you agree on how you communicate up front. Actually, the best programs probably allow **modularity** design amongst team members to execute the program code in the same level (or very nearly the same).

Desert Rose😊
